

SRI KRISHNA KALYAN BANDARU

Data Analyst | Adelaide, SA, Australia | Full Working Rights (485 Visa)

Phone: 0430 037 548 | Email: srikrishnakalyan7@gmail.com

Portfolio: srikrishnakalyan7.github.io | GitHub: github.com/SriKrishnaKalyan7

PROFESSIONAL SUMMARY

Data Analyst with a Master's in Artificial Intelligence and Machine Learning from the University of Adelaide and around two years in analytical and machine learning roles, alongside sixteen months supporting a live SAP environment for an enterprise client. Currently delivering retail, customer and marketing analytics on a freelance basis. Works across SQL, Python, Power BI and Tableau, with a focus on finding the cause behind a number that moved and quantifying what it costs, rather than reporting the number on its own. Engineering background in mechanical and mechatronics, and comfortable explaining findings to people without a technical background.

SKILLS

Data Analysis & Reporting: SQL (BigQuery, MySQL), Python (pandas, NumPy), Power BI, Tableau, Advanced Microsoft Excel (pivot tables, what-if modelling), dashboard development, statistical analysis, A/B testing

Machine Learning & AI: PyTorch, scikit-learn, model training and evaluation, cross-validation, computer vision (detection and segmentation), AI-assisted analysis workflows

Engineering & Tools: Python, C/C++, R, Git, Docker, FastAPI, Linux, ROS2, Azure, AWS, CI/CD, Agile/Scrum

Enterprise Systems: SAP (production support and exception handling), ERP data quality, incident triage and escalation, process documentation

Stakeholder Engagement: Requirements gathering, presenting findings to non-technical audiences, cross-functional collaboration, client reporting

PROFESSIONAL EXPERIENCE

Data Analyst (Freelance)

Sept 2025 – Present

DAT Academy | Adelaide, Australia

- Analyse retail sales datasets of up to 10,000 transactions in SQL and pandas, reporting revenue by region and country, profit by product category, monthly revenue trend, and the products driving return rates
- Analyse customer and campaign data across 8,000 transactions and 5,000 campaign records, comparing segment value, average order value, order frequency, channel ROI and regional campaign response
- Build the reporting layer in Power BI and Tableau, carrying total revenue, profit and order KPIs with regional, category and segment breakdowns, then write the executive summary that turns each result into a recommendation
- Run the analysis through AI-assisted workflows with a documented prompt log, so the route from business question to result stays traceable

Data & Systems Analyst, Research Placement

Feb 2025 – Aug 2025

Auto-ID Lab, University of Adelaide | Adelaide, Australia

- Investigated persistent failures in an autonomous UAV navigation test programme and traced the cause to feature-tracking collapse in low-texture environments, measuring about 5 tracked features per frame against a documented minimum of 15 to 20, then integrated a neural tracker that raised it to roughly 2,000
- Analysed planner performance across simulated test runs to document 4 recurring failure modes, benchmarked 3 candidate algorithms against them, and wrote up recommendations the team used to set its next direction
- Trained and benchmarked 5 object-detection configurations on a 28,000-instance dataset, quantifying the accuracy-versus-compute trade-off: a lighter backbone cut processing cost by 76% for a proportionate accuracy loss
- Migrated the open-source EGO-Planner stack, 5 ROS packages, from ROS1 to ROS2 so the platform would build on current infrastructure, and built 3 simulation environments so changes could be tested without risking hardware

Machine Learning Engineer Intern, Data & Model Performance Analysis

Aug 2024 – Feb 2025

Proto Corp Pvt Ltd | Remote, India

- Built and quality-checked a 3,508-image labelled dataset across 5 defect classes using polygon segmentation in Roboflow, exported in both YOLO and COCO formats so one labelled set served both model families without duplicate annotation
- Trained and compared 4 segmentation models on a 519-image, 1,514-instance validation set and recommended YOLOv8m-seg, which scored more than twice the accuracy of Mask R-CNN (0.259 against 0.122) at around half the compute
- Found that the 3 YOLO variants scored within 0.007 of each other despite a 43% spread in compute, showing the limit was architectural rather than a tuning problem, and recommended Vision Transformers, which the team adopted
- Built a FastAPI backend and Streamlit interface so testers and developers without model access could run the models and export results, then handed over weights and serving code that the team carried into its production build

Project Engineer, SAP Production Support

May 2018 – Sept 2019

Wipro Technologies | India

- Monitored SAP transaction queues on a 24/7 rotating roster, triaging several hundred processing errors per shift and diagnosing each failure well enough to route it to the responsible team (ABAP, CLICK, Plant Maintenance) or to onsite stakeholders in the UK
- Tracked recurring and high-volume error patterns filling the queue and escalated them with supporting detail, so fixes targeted root causes rather than repeatedly clearing the same failure

- Took over coordination of a 5 person support team as senior colleagues rotated off the project, owning the shift roster, acting as escalation point to management for incidents, and producing end-of-shift reports on error volumes, resolutions and open escalations for handover

ANALYTICS PROJECTS

Retail Sales Performance Analysis, Brazilian E-Commerce Market

SQL, Google BigQuery

- Analysed 100,000 orders across 8 linked datasets covering customers, orders, payments, freight and location, identifying a 137% increase in order value year on year as the headline performance indicator
- Surfaced seasonality in ordering with peaks in May, July and August, freight cost differences across 27 Brazilian states, and gaps in delivery performance, using multi-table joins, window functions and date-based aggregation
- Turned each finding into a specific commercial recommendation and presented the results in a format the business teams could act on without a technical background

Service Performance Investigation, Olist Marketplace

SQL, Power BI, Excel

- Customer scores had fallen for two months and one supplier group was assumed to be at fault. Built a bank of 13 SQL queries across 5 stakeholder teams and traced the cause to a delivery failure concentrated in a single region.
- Quantified the commercial impact: late orders scored 1.7 stars lower on average, around 2,500 orders and R\$350K of revenue were affected, and 54% of those reviews were one star
- Reviewed an experiment read-out and found its randomisation was broken before any conclusion was drawn, then delivered the corrected findings as a 3 page Power BI dashboard and an Excel what-if model

Content Strategy Analysis, Netflix Catalogue

Python, pandas

- Ran exploratory analysis on more than 8,800 Netflix titles to surface content distribution trends, seasonal patterns and category performance, then recommended timing aligned to demand peaks
- Handled extensive missing data with a layered imputation approach that kept a 202,000-row dataset usable, and communicated the findings in plain business language

Predictive Analytics, Alzheimer's Disease Diagnosis

Python, Statistical Modelling

- Built a predictive pipeline reaching 81% accuracy in identifying Alzheimer's progression from noisy neurological signal data
- Validated with leave-one-patient-out cross-validation and an AUC of 0.74, so the result held for unseen patients, and reported both figures together rather than the headline number alone

EDUCATION

Master of Artificial Intelligence & Machine Learning

University of Adelaide | **GPA: 6.1/7** (Distinction average) | Focus: Data Analytics, Machine Learning, NLP, Statistical Modelling

Dec 2025

Master of Science in Mechatronics Engineering

University of Rome 'Tor Vergata' | **Grade: 106/110** | Focus: Systems Analysis, Process Automation, Control Systems

2022

Bachelor of Mechanical Engineering

KL University, India | **First Class with Distinction** | Focus: Engineering Systems, Data Structures, Problem Solving

2018

REFEREES

Available on request.
